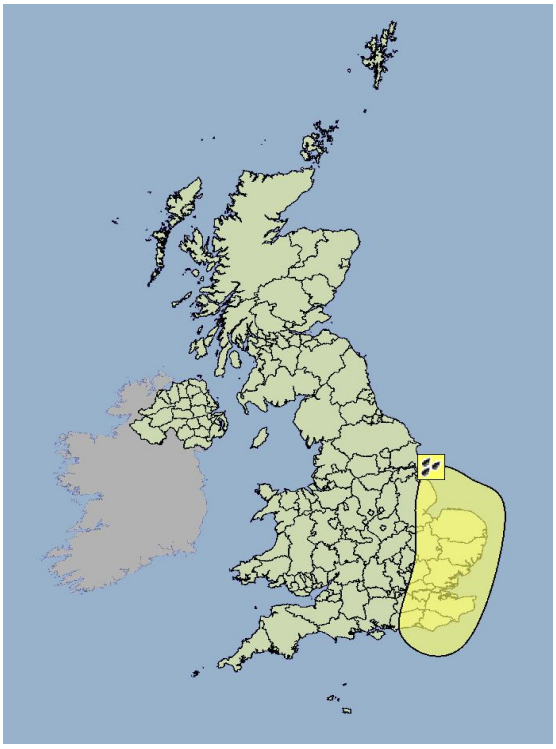
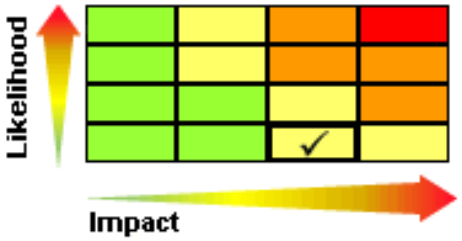
National Severe Weather Warning Service





Chief Forecasters Assessment
A thundery low over the continent will pass close to the southeast of England, bringing a band of rain with it. This is likely to contain thundery elements and locally very intense rain, bringing the risk of 20 mm in the hour and more than 60 mm in a few hours. As it comes west it should weaken, so the greatest risk of disruption is in eastern parts during the early hours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:15 on Tue, 31st May 2016** until **12:00 on Tue, 31st May 2016**

A band of rain, heavy and thundery in places, will spread westwards from the early hours of Tuesday morning. There is the risk that rain will turn torrential in places, with frequent lightning. Winds will also increase, with northerly gales on coasts. Whilst most places will miss the worst of the weather, please be aware of the risk of flash flooding.
